

System Evolution Update v2.0

A high-fidelity technical blueprint documenting the transition from core support to a clinical-grade AI wellness and civic ecosystem.

01. Core Infrastructure Logic

Module	Technical Description	Status
Authentication	Resolved persistent session redirect loops; implemented robust JWT persistence.	✓ Resolved
Data Reactivity	Patched "Update Lag" across dashboard components using reactive listeners.	✓ Optimized
PDF Generation	Engineered real-time vector PDF drawing engine for clinical reporting.	✓ Deployed

02. AI & Wellness Intelligence

Predictive Sentiment Engine

NLP

CONFID. 0.85

Integrated background sentiment analysis that scans journal entries for distress markers. If depressive keywords exceed thresholds, the UI proactively surfaces the Warm Handoff Crisis Bridge.

Voice-to-Reflection Transcription

WEB SPEECH API

TRANSCRIBE

Implemented real-time audio transcription for hands-free journaling. This removes typing barriers for users experiencing acute physical symptoms of anxiety.

Analytical Trigger Mapping

CORRELATION

INSIGHTS

Developed a module that cross-references Deep Work productivity sessions with Wellness Scores to calculate user "Golden Hours" and detect recurring stress patterns.

Conversational Assessment UI

UI/UX

STAGGERED

Replaced sterile medical forms with an approachable, staggered chat-bubble interface. This reduces user anxiety and increases completion rates for clinical-grade assessments.

03. Civic & Community Ecosystem

Hyper-Local Mutual Aid Board

DECENTRALIZED

AID

Launched a peer-to-peer resource board where community members post micro-requests (rides, clothing, food) that are instantly geocoded for nearby verified volunteers.

Dynamic Crisis Capacity Alerts

WEBHOOK

LIVE DATA

Map markers for local services now feature real-time capacity progress bars (Green/Red), preventing users in distress from traveling to facilities at full occupancy.

04. Technical Patches & UI Fixes

Profile Dashboard Optimization

Compressed vertical padding and shrunk avatar scale to ensure 100% viewport visibility on 13" laptop screens, resolving a critical overflow bug.

Dynamic Maps URL Injection

Patched dead links in locator cards. The system now dynamically injects live GPS coordinates into card-specific Google Maps search queries upon click.

Deep Work Grid Alignment

Enforced strict CSS Grid "Stretch" constraints to ensure the Timer, Mixer, and Brain Dump modules maintain identical vertical heights regardless of content.
